

How to find your enrollment key

Enrolment key

A course enrolment (or enrollment) key is one method to restrict Internal enrolment (student self-enrollments) to a smaller group. The default setting is not to set a key.

An enrolment key is often used as a simple method of having someone else beside the teacher determine if a particular student can self-enroll in the course. The idea is that one or more people will supply the course key to authorized people. Sometimes this distribution is private email, snail mail, on the phone or even verbally in a face to face meetings such as a class or counselor's office.
