Casper College Course Syllabus

COSC 1030 — Computer Science I

Fall 2015

Lecture hours: 3  
Lab hours: 2  
Credit hours: 4

Class time: 9–9:50 a.m.  
Days: MTWThF  
Room: PS 325

Instructor’s name: Kevin Lenth  
Office: PS 335  
E-mail: lenthk@caspercollege.edu

Office hours: M 1–2,  
Office phone: 268-2519  
T 11–12 & 1–2,  
W/Th/F 11–12

Course Description

Study of algorithmic problem solving using principles of structured programming and object-oriented design. Algorithms are implemented in a high-level, object-oriented language. Programming assignments and experimentation with software in a closed laboratory supplement the discussion.

Prerequisites

Previous programming experience required and COSC 1010 or instructor permission

Goal

This course reintroduces the fundamental structures of programming (variables and data types, expressions, selection and repetition structures, functions, and arrays) in the context of the language C++; additionally, students are taught recursion and the fundamentals of object-oriented design. By the end of the course, the successful student will be able to integrate all of these structures for the solution of problems.

Outcomes

General education

This course meets the following Casper College general education outcomes:

3. Solve problems using critical thinking and creativity  
8. Use quantitative analytical skills to evaluate and process numerical data

Casper College may collect samples of student work demonstrating achievement of the above outcomes. Any personally identifying information will be removed from student work.
Course objectives

Upon successfully completing this course, students will be able to

- explain what a recursive function is and give topical examples of their application;
- define important words in the terminology of object-oriented programming and give examples of their use;
- design and implement a C++ class for a given specification;
- combine the various tools of programming appropriately to solve problems.

Methodology

This course is presented as a lecture supplemented with laboratory work and hands-on experimentation.

Evaluation Criteria

The grade breakdown is as follows.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Assignments</td>
<td>40%</td>
</tr>
<tr>
<td>MyProgrammingLab problems</td>
<td>14%</td>
</tr>
<tr>
<td>Tests</td>
<td>3 x 12%</td>
</tr>
<tr>
<td>Labs</td>
<td>10%</td>
</tr>
</tbody>
</table>

Final grades will follow the usual 60/70/80/90 scale (90% or higher is an A, etc.) with the following exceptions:

- Students shall not receive a passing grade unless they earn a passing grade (60% or higher) within each category individually. For instance, a student who has 70% overall but only 40% on assignments will receive an F.
- Students who demonstrate dedication to the course (i.e., good attendance, much class participation, frequent office hour visits) may have their final grade bumped upward in borderline cases at the instructor’s discretion.

Assignments will be given to allow students to master each section of course material and may take the form of either written work or a program. In the case of programming assignments, the grade breakdown is summarized below.

<table>
<thead>
<tr>
<th>Weight</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>70%</td>
<td>The submission correctly and completely implements the required behavior</td>
</tr>
<tr>
<td>10%</td>
<td>The submission is structured in a reasonable fashion and makes use of appropriate language constructs</td>
</tr>
<tr>
<td>10%</td>
<td>The submission is adequately commented and easy to read</td>
</tr>
<tr>
<td>10%</td>
<td>A sufficient narrative document is supplied</td>
</tr>
</tbody>
</table>

If the submitted program does not compile, no grade higher than 50% will be awarded.

Each programming assignment submission must be accompanied by a narrative document, a brief description of the purpose of the program along with a discussion of the process of writing the program (challenges, mistakes found, additional resources used, etc.).
Paper tests will be administered upon three occasions in class. The goal of these tests is to assess general knowledge of the material, as opposed to capability which is measured by programming assignments. Tests are not cumulative (beyond the inherently cumulative nature of the subject); students are not permitted use of the book, notes, a calculator, the Internet, or other resources while taking a test. 

Class quizzes will be given frequently throughout the semester to check understanding of the day’s reading assignment. The class quiz grade replaces the lowest test grade when final grades are computed at the end of the semester.

Required Text, Readings, and Materials

The required textbook is Starting Out with C++ Early Objects (eighth edition, with MyProgrammingLab) by Gaddis, Walters, and Muganda (ISBN-13: 978-0-13-336092-9). The student may obtain a traditional physical copy of the book or an electronic edition (available at coursesmart.com among other sites) at his or her option. The included student access code is not required, however a MyProgrammingLab access code is required for this course. This code is included with new copies of the physical book and may also be purchased standalone at myprogramminglab.com.

The course Moodle shell (accessible from https://moodle4me.caspercollege.edu/) will be used extensively: daily readings, homework assignments, and announcements will be posted thereon.

Class Policies

Last Date to Audit or Withdraw: November 12th

Attendance. Every student is expected to attend every class meeting with punctuality.

Class participation. All students are expected to participate actively in class; this entails asking questions and being receptive to questions asked by the instructor. Students are also expected to use the classroom computers for purposes related to class, i.e. taking notes and following along in examples. Excessive or disruptive use of the computers for non-class-related activities will result in ejection from the class.

Late assignments. Assignments will be accepted up to five days after their due date with a penalty of 10% credit for each day.

Syllabus emendation. The instructor reserves the right to amend this course syllabus at any time. If this occurs, an announcement will be made and the modified syllabus will be made available to the class.

Student Rights and Responsibilities

Please refer to the Casper College Student Conduct and Judicial Code for information concerning your rights and responsibilities as a Casper College student.
Chain of Command

If you have any problems with this class, you should first contact the instructor to attempt to solve the problem. If you are not satisfied with the solution offered by the instructor, you should then take the matter through the appropriate chain of command starting with the Department Head, the Dean, and lastly the Vice President for Academic Affairs.

Academic Dishonesty

Casper College demands intellectual honesty. Proven plagiarism or any form of dishonesty associated with the academic process can result in the offender failing the course in which the offense was committed or expulsion from school. See the Casper College Student Code of Conduct for more information on this topic.

Official Means of Communication

Casper College faculty and staff will employ the student’s assigned Casper College e-mail account as a primary method of communication. Students are responsible for checking their account regularly.

The instructor’s e-mail address is lenthk@caspercollege.edu (not klenth@caspercollege.edu); e-mail is the best method of contacting the instructor outside of class or office hours. Class announcements will be made via the course’s Moodle shell.

ADA Accommodations Policy

If you need academic accommodations because of a disability, please inform the instructor as soon as possible. See him privately after class or during his office hours. To request academic accommodations, students must first consult with the college’s Disability Services Counselor located in the Gateway Building, room 344, (307) 268-2557, bheuer@caspercollege.edu. The Disability Services Counselor is responsible for reviewing documentation provided by students requesting accommodations, determining eligibility for accommodations, and helping students request and use appropriate accommodations.
