

So if a plesiosaur wasn't a dinosaur, what was it?

Plesiosaurs are so different from the other reptiles that they've been placed in a superorder of their own, the sauropterygia. Sauropterygians also include Claudiosaurus and the nothosaurs.

For more information on these sea creatures visit Adam Stuart Smith's website titled "The Plesiosaur Directory" at <http://www.plesiosauria.com/index.html>.
